AQURA Care platform

The open communication platform
for the care and cure market, that
offers you a complete solution,
right now and in the future.

Personal alarming & room level accurate localization

- › Request for help & distress alarming
- › Wandering detection & prevention
- › Location based workflows

AQURA Ca

Open platform

- › Third party integrations
f.e. fall detection, smart beds, wearables
- › API & connectors
- › No vendor lock-in

Discover our all-in-one platform

Nurse call & workflow triggers

- › Wired nurse call
- › Wireless nurse call
- › Workflow triggers, integrated with care registration/EHR

re platform

Intelligent alarm distribution, workflows & insights

- › Smart routing of alarms, workflows & events
- › Add reasons through call annotations
- › Bring insights through meaningful dashboards
- › Workflows
- › Mobile application (Android)

Televic Healthcare

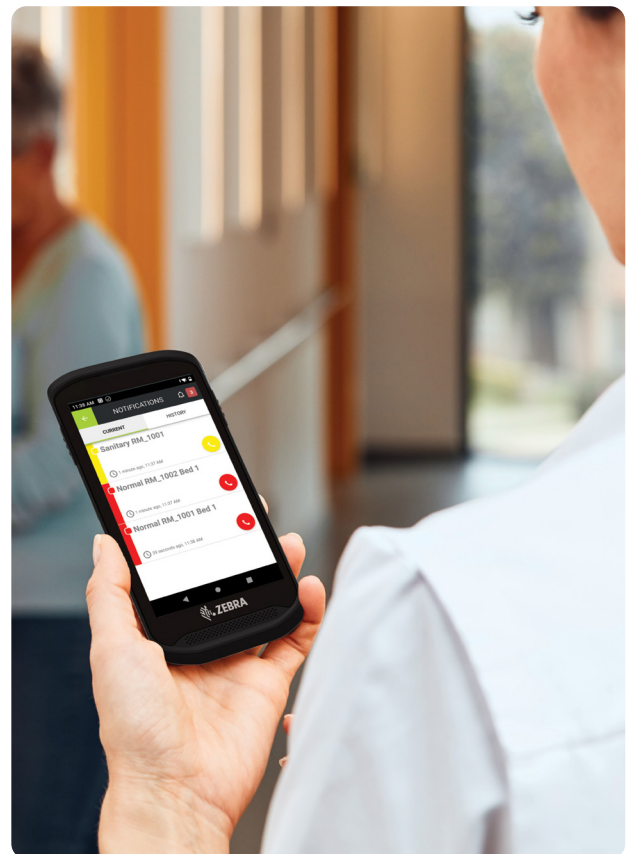

AQURA Care platform offers you:

- › An open platform: integrations with other systems
- › A single intuitive user interface
- › High availability through automatic fallback and fault detection up to end device level
- › A mobile application: consolidates all events and alarms of Televic and third party devices
- › Valuable insights: resulting in data driven decisions
- › Modular & scalable: investment protection
- › Quick, easy installation and fast replacement

Since 1953 Televic Healthcare develops and manufactures technology solutions that give healthcare workers the power to make the best decisions in an environment where time is crucial. These solutions result in:

- › High quality care for patients & residents
- › Increased efficiency for professionals in the care & cure market
- › Safety for all

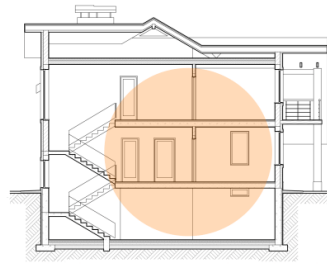

Personal alarming & room level accurate localization

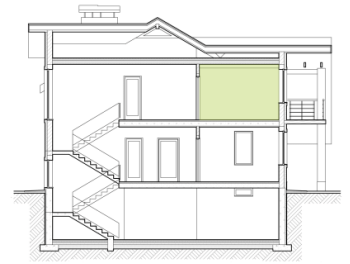

Televic humanizes personal alarming through the concept of profile based tags. Nurses, patients and residents wear the same tag, avoiding stigmatization. A call includes the exact and real-time location within your facility.

Room level accurate indoor localization through Televic's patented technology  combining radiofrequency, magnetic induction and ultrasound technology. This results in guaranteed security for your residents or patients and increased efficiency through the avoidance of false alarms.

The competition:
"Location estimation"

Televic:
"Room level accuracy"

Safe and easy identified cancellation of alarms by bringing the nurse and patient tag in close range, ensuring personal contact between patient or resident and care giver. All actions, interventions and response times are stored in the database, for reporting and insights.

Wandering detection and prevention solutions require the best in class indoor location technology. Our AQURA wireless technology is specifically designed for room accurate indoor localization ensuring:

- › Fast and accurate door control for runaway prevention
- › An open and safe environment for wandering patients or residents
- › Reduction of false alarms to an absolute minimum

| › Shock resistant | › Updated in real-time |
| › Discrete anti-removal clip | › Non-stigmatizing |

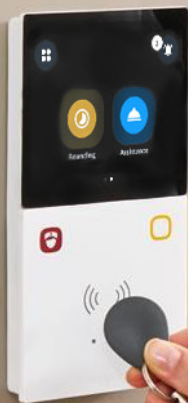

Nurse call & workflow triggers

Televic Healthcare offers wired and wireless nurse call solutions, allowing communication between patient/resident and caregivers.

Our solutions can trigger workflows to automate care processes and unburden care professionals.

AQURA Essentials

These are the modular components of an unshakable and reliable communication platform for your healthcare institution. Quick to install and with a long service life.

AQURA Care platform is our all in one flagship communication platform, but did you know that you can start small with AQURA Essentials and upgrade later. Upgrade to our **AQURA Care platform**, while keeping your installed products in use. Thus resulting in a long-term investment protection, whichever way you start.

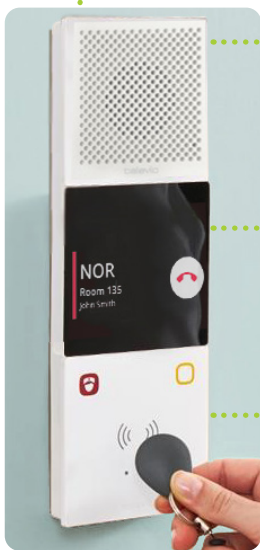

Upgrade to

AQURA Care Platform

The AQURA Care platform uses the same high-quality components as AQURA Essentials, but allows you to add several smart units, thanks to its server-based setup.

These units are modular and can be combined or operate as separate units.

Digital intercom

Handsfree crystal clear duplex audio up to 5 meters. With echo cancellation, noise suppression and SIP addressable.

Smart touch unit

A modular interface: click on alarms and directly initiate an intercom call, launch a workflow and trigger domotics.

Mifare authentication

Easy and quick authentication of staff with Mifare improving safety and insights.

Make units wireless, without changing your infrastructure.

Push pear & handsets

Providing an easy accessible alarm button and access to domotics and entertainment.

Monitoring cable

This money saving connector has a magnetic auto-release socket. The gold plated contact pins ensure a reliable connection.

Terminal

Our 10 inch terminal easily connects caregivers to information that matters: from resident information provided by integrated care records, to overviews of prioritized alarms. The supported workflows help automatize repetitive care tasks and thus unburden care professionals.

Intelligent alarm distribution, workflows & insights

TRIGGER

Monitor your patients through wearables and smart devices

PROCESS

Smart decisions that improve patient safety and staff efficiency

DISTRIBUTE

Meaningful alarm notifications to targeted caregivers

REACT

Better communication & collaboration between staff and patients

ANALYZE

Improve patients and staff satisfaction through insights

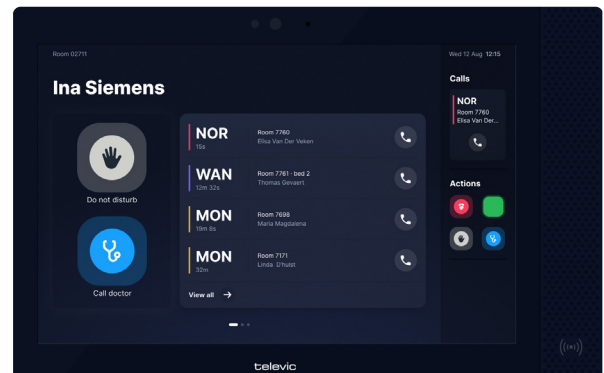

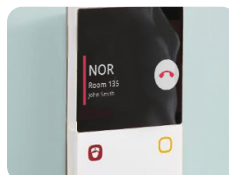

Everyday healthcare professionals are faced with a high volume of alarms, many of which do not require action. This can lead to stress, frustrations and in worst cases, to alarm fatigue. With AQURA's **intelligent alarm distribution**, staff:

- › benefits from fewer false alarms
- › can cascade an alarm when they are busy
- › can activate a workflow via just one click on the button

With our **mobile application** a caregiver can consolidate all events and alarms into one intuitive application. They can watch live camera images, open doors and even trigger workflows.

Optimize your workflow to:

- › Reduce operational costs & administration
- › Improve staff efficiency, patient safety & quality of care
- › Reduce alarm fatigue & avoid missed alarms

Dashboards: turn data into information

AQURA reporting and dashboarding is unique. Why? Because it consolidates all data from internal and third party devices. This gives you the chance to make data-driven decisions, in order to maximize safety and efficiency, optimize staff performance and create a stress-free environment.

Created by staff for staff

The outcome of our research with focus groups in hospitals and care facilities was the starting point of the development of our dashboards. Get to know our different types:

- › **Patient/resident dashboard:** what is the reason for an alarm?
- › **Staff dashboard:** provides insights on (un)planned care & make improvements.

Our dashboards enable you to:

- › Optimize staff efficiency & increase quality of care
- › Monitor key performance indicators (KPI)
- › Get insights & organize unplanned care

Open platform & integrations

Ecosystem

In the past a nurse call system was a technology island at the point of care. Today AQURA offers a complete care communication platform that integrates:

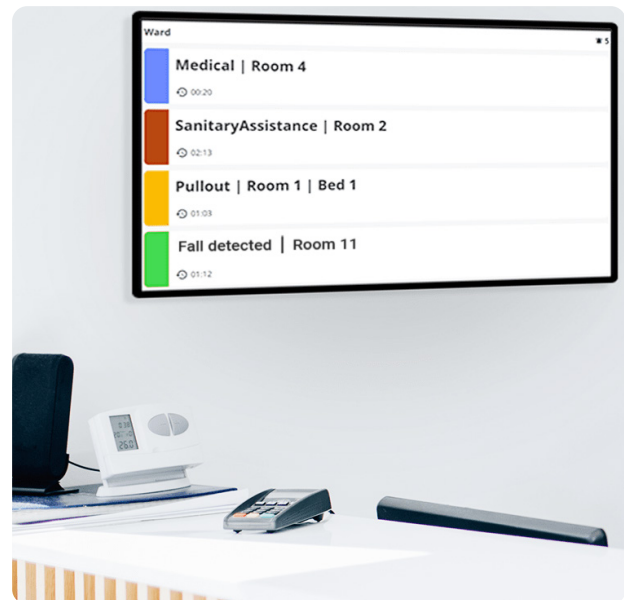

- › alarm notification
- › communication & collaboration
- › workflow automation
- › third party systems & sensors

The AQURA Care platform was built with the vision to **integrate with complementary technologies** such as wearables, sensors, smart beds, fall detection systems. The openness of the platform allows to integrate with third parties and legacy systems through connectors and API.

Our AQURA mobile application consolidates all events and alarms from Televic and third parties into **one single application**. Driving efficiency and easiness of use.

Benefits for you:

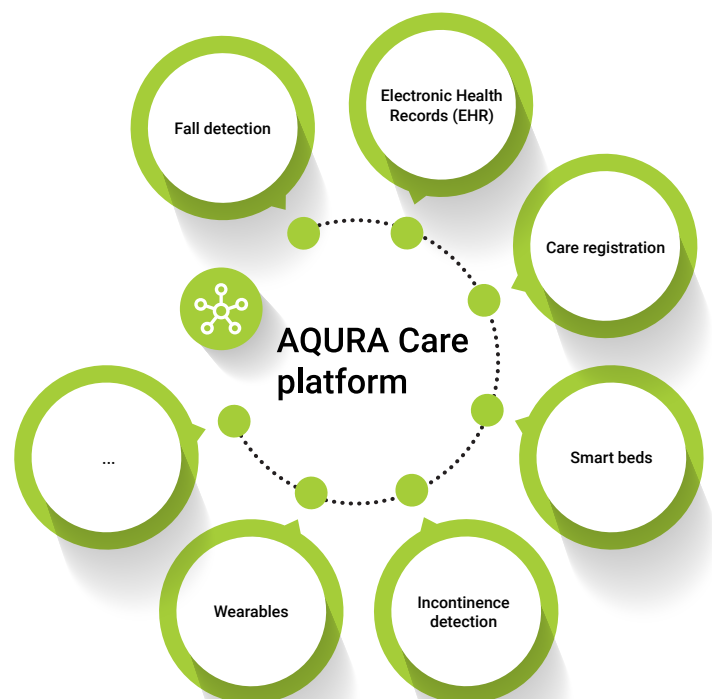

- › Consolidation of all the alarms & events in one platform
- › Seamless integration into the AQURA mobile app
- › Flexible integration with other systems (no-vendor lock-in)

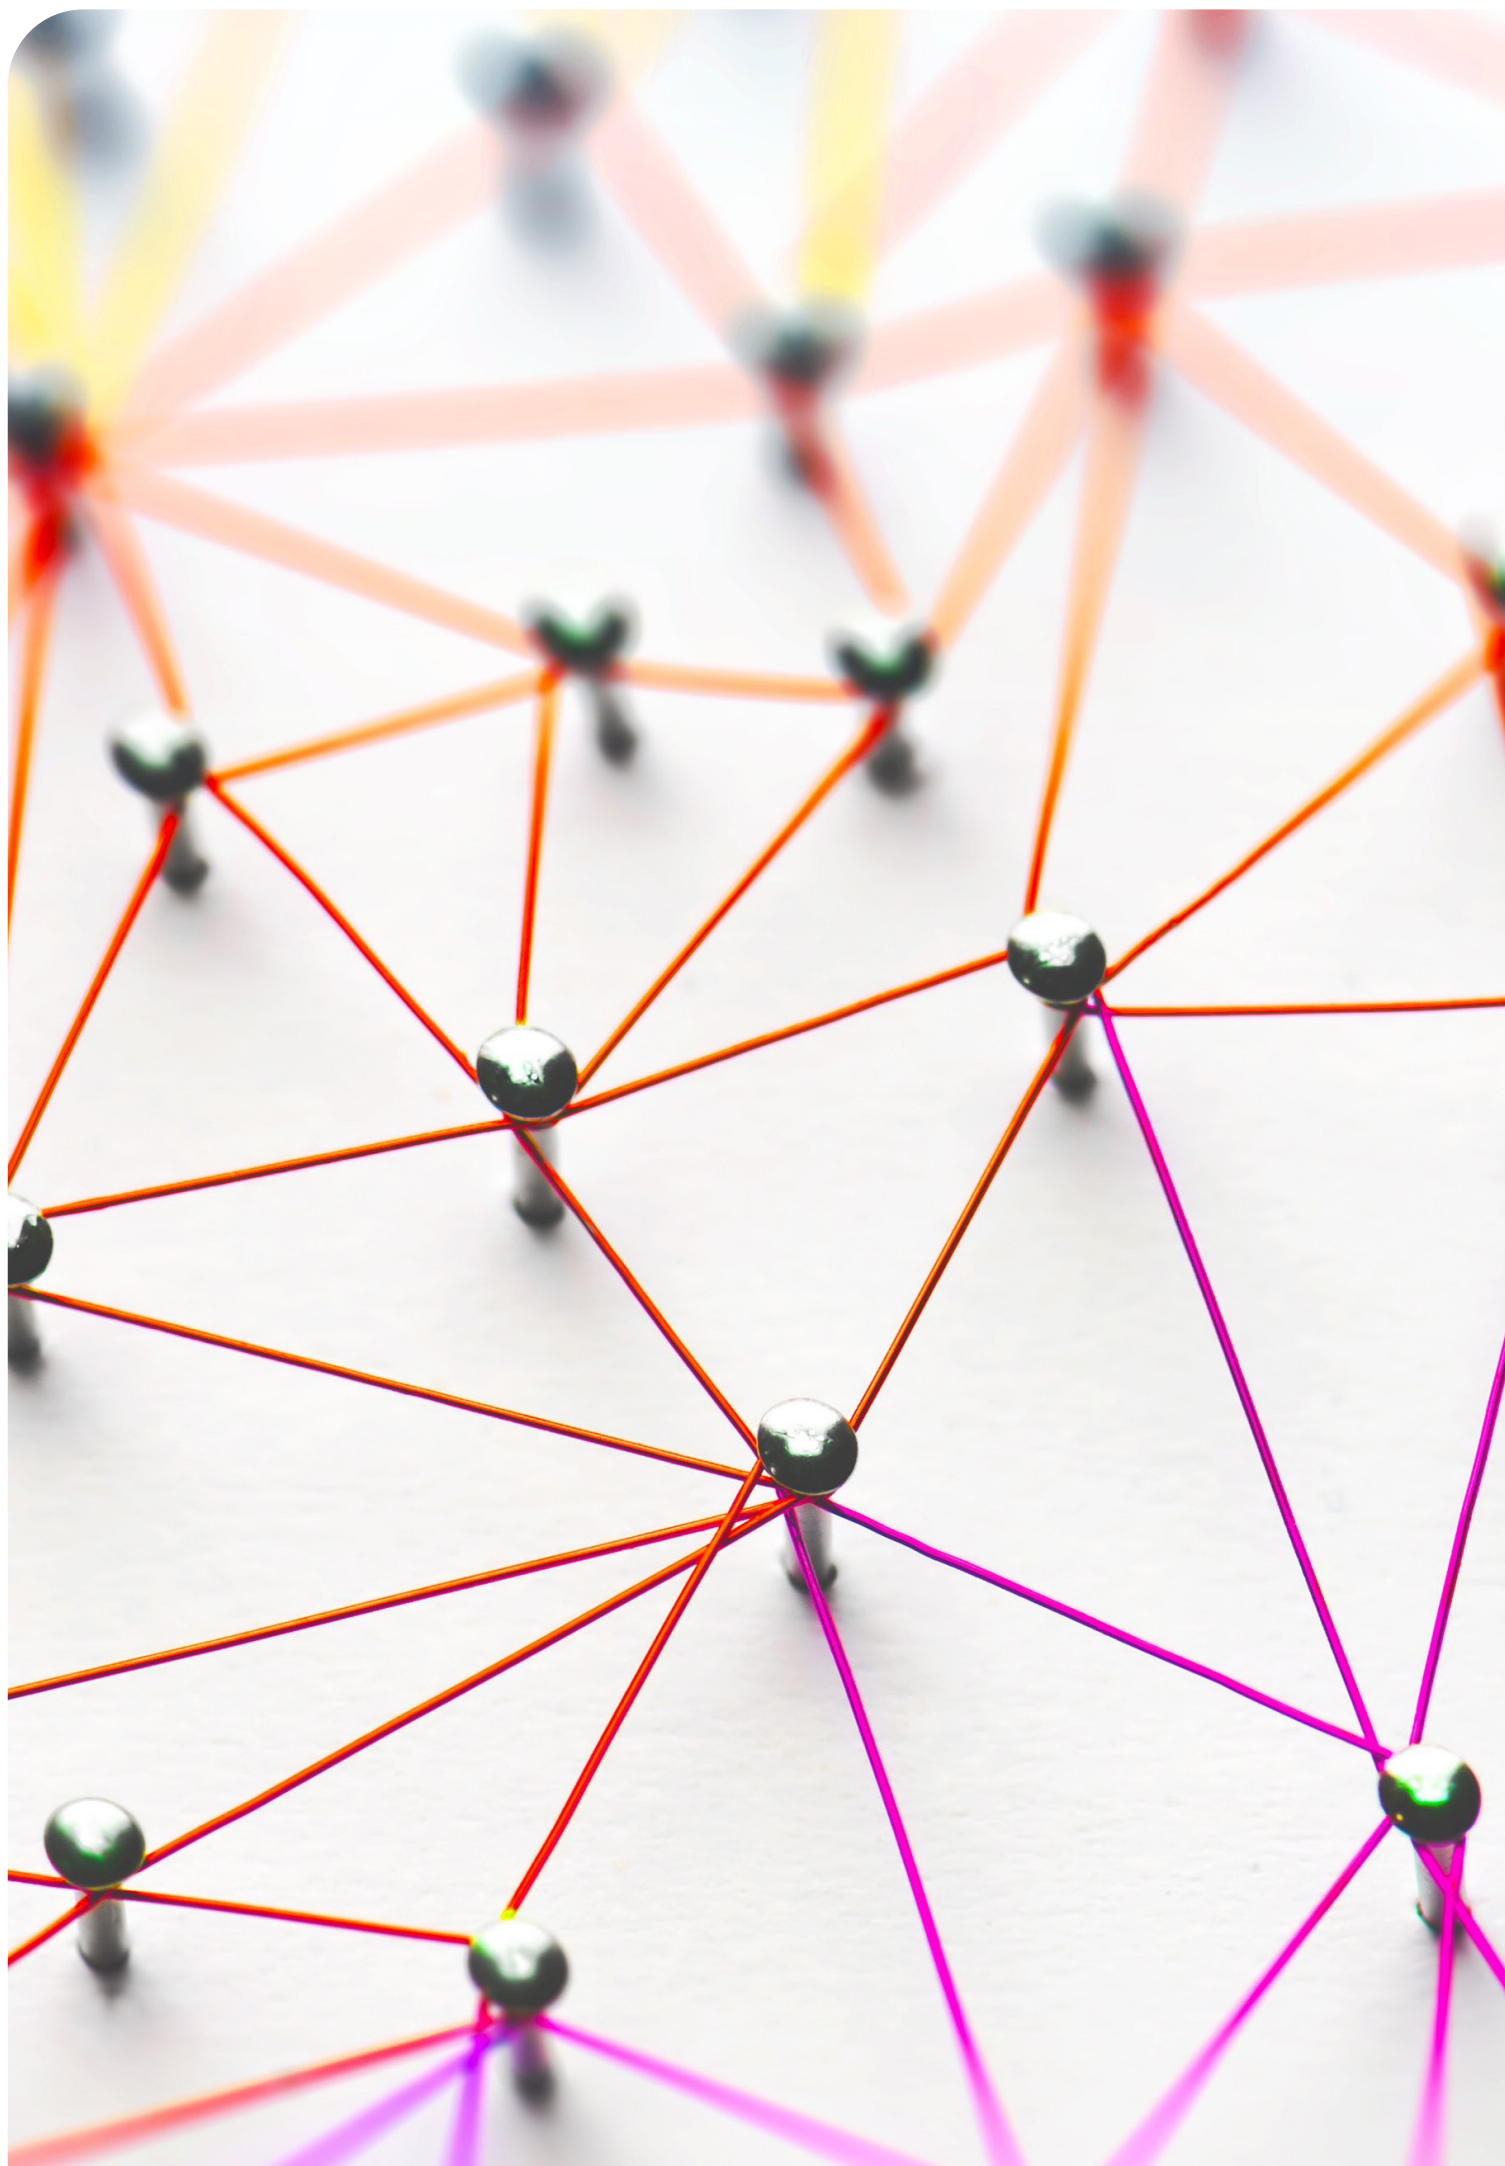

Integrate EHR systems & care registration software

Digitalization and efficiency enhancement through seamless integration with electronic health records (EHR) and care registration software. Results in:

- › increased efficiency
- › data consolidation
- › reduction of errors
- › increased quality of care

The AQURA Care platform reduces stress for caregivers, which leads to better care for patients.
